

Senior PM Scoring

Scenario C · Consumer Resolution Velocity | Effort vs. Value assessment

Persona Consumers with stable income and opened cases	Primary Metric Digital Resolution Rate	Moment of Misery Consumers Abandoning Resolution Flow	Guardrail Monthly Active Consumers
---	--	---	--

Scoring logic: Value reflects expected impact on Digital Resolution Rate and reduction of Consumers Abandoning Resolution Flow. Effort assumes 3 developers + 1 QA, 2-week sprints, and quarterly roadmap planning. Quick Win = high value / low effort; Major Project = high value / high effort; Fill-In = low value / low effort; Time Sinker = low value / high effort.

Feature Scoring

#	Feature	Value	Effort	Quadrant	Rationale
C1	AI Claim Explanation	4	2	Quick Win	Consumers abandon flows when they do not understand claim language; clarity directly improves progression.
C2	Guided Resolution Wizard	5	3	Quick Win	Directly addresses abandonment by guiding consumers toward resolution instead of leaving the journey.
C3	One-Click Payment Plan Setup	5	2	Quick Win	Removes friction from a core resolution action and should directly increase Digital Resolution Rate.
C4	Resolution Progress Tracker	4	1	Quick Win	Reduces uncertainty and helps consumers continue rather than abandon mid-process.
C5	Personalized Resolution Recommendations	4	4	Major Project	Potentially valuable, but personalization logic requires significant effort before proving impact.
C6	Smart Document Upload	5	3	Quick Win	Missing or rejected documents are a major drop-off source; reducing upload friction should materially improve completion rates.
C7	Contextual Help & FAQ	3	2	Fill-In	Helpful for comprehension but less effective than directly simplifying the workflow itself.
C8	Proactive Resolution Notifications	4	3	Quick Win	Helps bring users back into incomplete journeys and reduces abandonment over time.
C9	Consumer Trust Dashboard	3	3	Fill-In	Improves transparency but is more informational than resolution-driving.
C10	Search-to-Resolution Experience	4	3	Quick Win	Removes navigation friction and gets consumers faster into actionable flows.
C11	AI Chat Resolution Assistant	3	5	Time Sinker	High implementation cost and uncertain impact compared with simpler workflow improvements.
C12	One-Click Dispute Submission	4	2	Quick Win	Significant friction reduction for a key consumer action.
C13	Resolution Confidence Indicator	4	1	Quick Win	Reassures consumers they completed required steps and reduces premature exits.
C14	Mobile-First Self-Service Dashboard	4	4	Major Project	Valuable because most consumers are mobile-first, but requires broad UI restructuring.
C15	Support Escalation Assistant	2	3	Time Sinker	Helps support efficiency but does not materially improve Digital Resolution Rate.

Priority Ranking

Tier 1 - Build First (Quarter 1)

1. C3 One-Click Payment Plan Setup
2. C2 Guided Resolution Wizard
3. C6 Smart Document Upload
4. C4 Resolution Progress Tracker
5. C13 Resolution Confidence Indicator
6. C1 AI Claim Explanation

These features attack the exact moment of misery: Consumers Abandoning Resolution Flow.

Tier 2 - Build Next

1. C8 Proactive Resolution Notifications
2. C10 Search-to-Resolution Experience
3. C12 One-Click Dispute Submission
4. C7 Contextual Help & FAQ

They increase completion and recovery of partially completed journeys.

Tier 3 - Strategic Investments

1. C14 Mobile-First Self-Service Dashboard
2. C5 Personalized Resolution Recommendations
3. C9 Consumer Trust Dashboard

Valuable, but unlikely to outperform Tier 1 features in the next roadmap cycle.

Tier 4 - Avoid for Now

1. C15 Support Escalation Assistant
2. C11 AI Chat Resolution Assistant

Both consume meaningful capacity while contributing only indirectly to the primary metric.

Ruthless PM Takeaway

If capacity is limited to six features in one quarter, fund C2, C3, C4, C6, C1, and C13.

Together they directly reduce abandonment, increase consumer confidence, and remove friction from the highest-value resolution paths.
